## Lock-In Preamplifier

SR552 — BJT input preamplifier

The SR552 Voltage Preamplifier is designed to work with SRS lock-in amplifiers, providing gain where it is needed most-right at the experiment. The preamplifier minimizes noise and pickup in the connecting lines and can reduce measurement time in noise-limited experiments. The SR552 has a bipolar front-end design (100 k $\Omega$  impedance, 1.4 nV/√Hz noise). Power and control signals are brought from the lock-in by a 9-pin cable (included). The SR552 may also be operated independently by applying appropriate power supply voltages (±20 VDC, +5 VDC).

- · 1.4 nV/√Hz input noise
- $\cdot$  BJT input, 100 k $\Omega$  input impedance
- · Gain of 10, 20, 50 or 100
- · Single-ended and differential inputs
- · AC coupled input
- · Powered by SRS lock-in amplifiers

## **SR552 Specifications**

 $100 \,\mathrm{k}\Omega + 25 \,\mathrm{pF}$ Input impedance

Single-ended or differential Inputs Maximum input 70 mVrms for overload

50 VDC, 20 VAC damage threshold

Noise (typ.)  $1.4\,\mathrm{nV}/\mathrm{VHz}$  at  $1\,\mathrm{kHz}$ 

> $1.6\,\mathrm{nV/\sqrt{Hz}}$  at  $100\,\mathrm{Hz}$  $2.5 \,\mathrm{nV/\sqrt{Hz}}$  at  $10 \,\mathrm{Hz}$

AC (0.016 Hz)

Coupling CMRR (1 V input) 100 dB at 100 Hz

Gain 10, 20, 50, 100 (Automatically set

by SR510 or SR530 lock-in)

Full-scale input  $10\,\text{nV}$  to  $200\,\text{mV}$ Gain accuracy 2% (2 Hz to 100 kHz)

Gain stability  $200 \, \text{ppm}/^{\circ} \text{C}$ 

Outputs A (signal,  $600 \Omega$ , single-ended)

B (shielded ground)

Maximum output  $10\,\mathrm{Vpp}$ 

Power Supplied by SR510, SR530, SR810,

SR830, SR850 or SR124 via

control cable

 $3.0" \times 1.3" \times 5.1"$  (WHD) Mechanical

Weight

Warranty One year parts and labor on defects

in materials and workmanship
